

Aponia Dental News

Greetings from your Neighbourhood Dentists!

Aponia Dental 780-944-1999

Dear North Edmonton Residents,

Aponia Dental has been undergoing significant number of renovations so that we could improve our ability to communicate with current and new patients through having private consult rooms and better e-mail infrastructure. Our hope is to have a better patient experience that maximizes our ability to communicate with patients.

A new direction that we have been taking is selecting dental treatments that are "designed with you in mind."

We currently provide the familiar orthodontic treatment with the brackets placed on the outside surface of the teeth; however, we now offer orthodontic treatment on the inside (tongue) side of the teeth called 3M[™] Incognito[™]. The 3M[™] Incognito[™] is specifically designed for the 28-45 year old power professional who doesn't want their colleagues to see they are undergoing orthodontic treatment.

We are looking forward to serving you in 2014 with our renovated administration area and further refining our product offerings.

Dr. Brandon Wong & Team

A NEW YEAR, A NEW YOU!

Each new year brings with it the promise of renewal and improvement in our lives. Why not greet 2014 with a sparkling white smile to match the bright new year?

If your teeth are currently yellow, dull, stained or shaded unevenly, or if you have any old dental work that doesn't match your natural teeth any more, you'll be pleased to find out how easy it is to solve those very common imperfections. Even crooked teeth can be straightened more easily and less noticeably than ever before!

Whitening your teeth is one of the easiest and most satisfying changes you can achieve. All it takes is a visit to our office to start the whole process, which will begin with an analysis of your teeth and gums to ensure that you have a healthy mouth, and a discussion on what you should expect from your tooth-whitening program.

Bonded & Lingual Braces Now Available For Low-Complication & Non-Surgical Cases

If your teeth are not as straight as you'd like, please ask us about 3M[™] Incognito[™] Hidden Braces – a discreet way to correct crooked teeth – with no visible metal wires! Our practice offers lingual braces, where brackets and wires are secured to the inside – or lingual side – of your teeth, leaving no outward evidence of an orthodontic appliance when you smile!

Remember, research has shown that you have less than ten seconds to make a good first impression on anyone you're meeting for the first time. 3M[™] Incognito[™] Hidden Braces are for the 28-45 year old Power Professional who wants to straighten their smile discreetly. This product was designed with you in mind!

Please call us today to ask about teeth whitening, lingual braces, veneers and all our other smile improvement options, to ensure that your first impression is your best impression!

problem or visit.***

**According to Health Canada*

According to the Canadian Paediatric Society, dental health can affect the functional, psychological and social dimensions of a child's well-being. Oral pain has devastating effects on children, including lost sleep, poor growth, behavioural problems and poor learning. Developmentally crucial processes of communication, socialization and self-esteem are also affected by poor dental health. Dental problems are associated with a substantial reduction in school attendance and in parental working days.

A reminder to please call our office at (780) 944-1999 to schedule an appointment for your professional cleaning and dental exam.

My teeth don't hurt and I brush my teeth every day. Why do I need a dental exam?

If you wait until your teeth are hurting, to have a dental exam, you have waited too long. Many dental conditions, including tooth decay and periodontal disease, often don't give you pain until they are in an advanced stage. By maintaining a regular dental exam, your dentist can identify early signs of tooth decay, oral cancer, periodontal disease, and changes to overall health. This early detection can save you time, money, and the health of your teeth and gums.

Professional Hygiene is a bonus for healthy teeth and gums!

The dental hygienist is the primary member of the dental team that focuses on disease prevention. Health promotion, wellness, and risk assessment are key components of the curricula of dental hygiene programs. A dental hygienist performs a variety of assessments during the provision of patient care. Information, signs and symptoms from the patient's medical and dental history and the extra- and intraoral assessments provide data to allow the dental hygienist to determine the patient's risk for disease such as oral cancers, dental caries, and periodontal disease.
